Blue Castle Holdings Provides Expert Testimony to Legislative Committee

SALT LAKE CITY, UT – Blue Castle Holdings Inc. (BCH), developer of a proposed new nuclear power plant project in Green River, Utah, presented expert testimony yesterday to the Utah Public Utilities and Technologies Interim Legislative Committee about the safety of the U.S. nuclear power plants industry.

Dr. Nils Diaz, former chairman of the Nuclear Regulatory Commission, testified “It is important to separate the United States from Japan,” said Nils Diaz, “We believe it is extremely unlikely that an accident at a U.S. reactor will have serious consequences.” “Moreover, new plants will further reduce the likelihood of any harm from nuclear reactors because of new-soon-to-be approved designs... The fact is, we have done study after study and believe it would be extremely rare to have an accident in a U.S. reactor that would have catastrophic radiological consequences.”

The committee responded favorably overall to the information presented. Rep. Roger Barrus, R-Centerville, stated that the nuclear industry is already safe and will be more so with new plant designs. “I am one,” Barrus said of the full array of energy sources, “who says we need them all.”

About Blue Castle Holdings

Blue Castle Holdings Inc. is a Utah-based company developing a leading new nuclear plant site in the Western U.S. BCH business model is to select, acquire, enhance, and license a plant site which is well suited for the deployment of new nuclear power generation.
